FLEXIDOME MULTI 7000I

A MULTI-DIRECTIONAL OVERVIEW OFFERING HIGHLY DETAILED INSIGHTS

Built-in Artificial Intelligence
With Intelligent Video Analytics and Camera Trainer on each imager.

- Perimeter protection
- Video analytics extremely resistant against shaking
- Camera Trainer functionality
- Alerts when needed
- Quickly retrieve correct data

Installation made simple

- 4 cameras, 1 cable
- 1 IP address
- Compatible with modular accessories
- Wireless WiFi dongle connection via USB (Available mid 2021)

The new FLEXIDOME multi 7000i and FLEXIDOME multi 7000i IR* are intelligent multi-directional cameras that combine four independent camera sensors, 3.3-7.7mm AVF lenses with a total resolution of 12 to 20 MP. They provide the ideal solution for wide area coverage like traffic intersections and building corners, where detailed insights of a scene are a must. What's more? The solution is highly flexible and convenient: although the solution houses four independent camera sensors, it requires only a single network connection, a single IP address and only needs a single Video Management System license.** On top of that, these cameras come with built-in Artificial Intelligence (Intelligent Video Analytics and Camera Trainer), taking data usage to a whole new level.

*IR model available July 2021.

**Depends on VMS partner.
